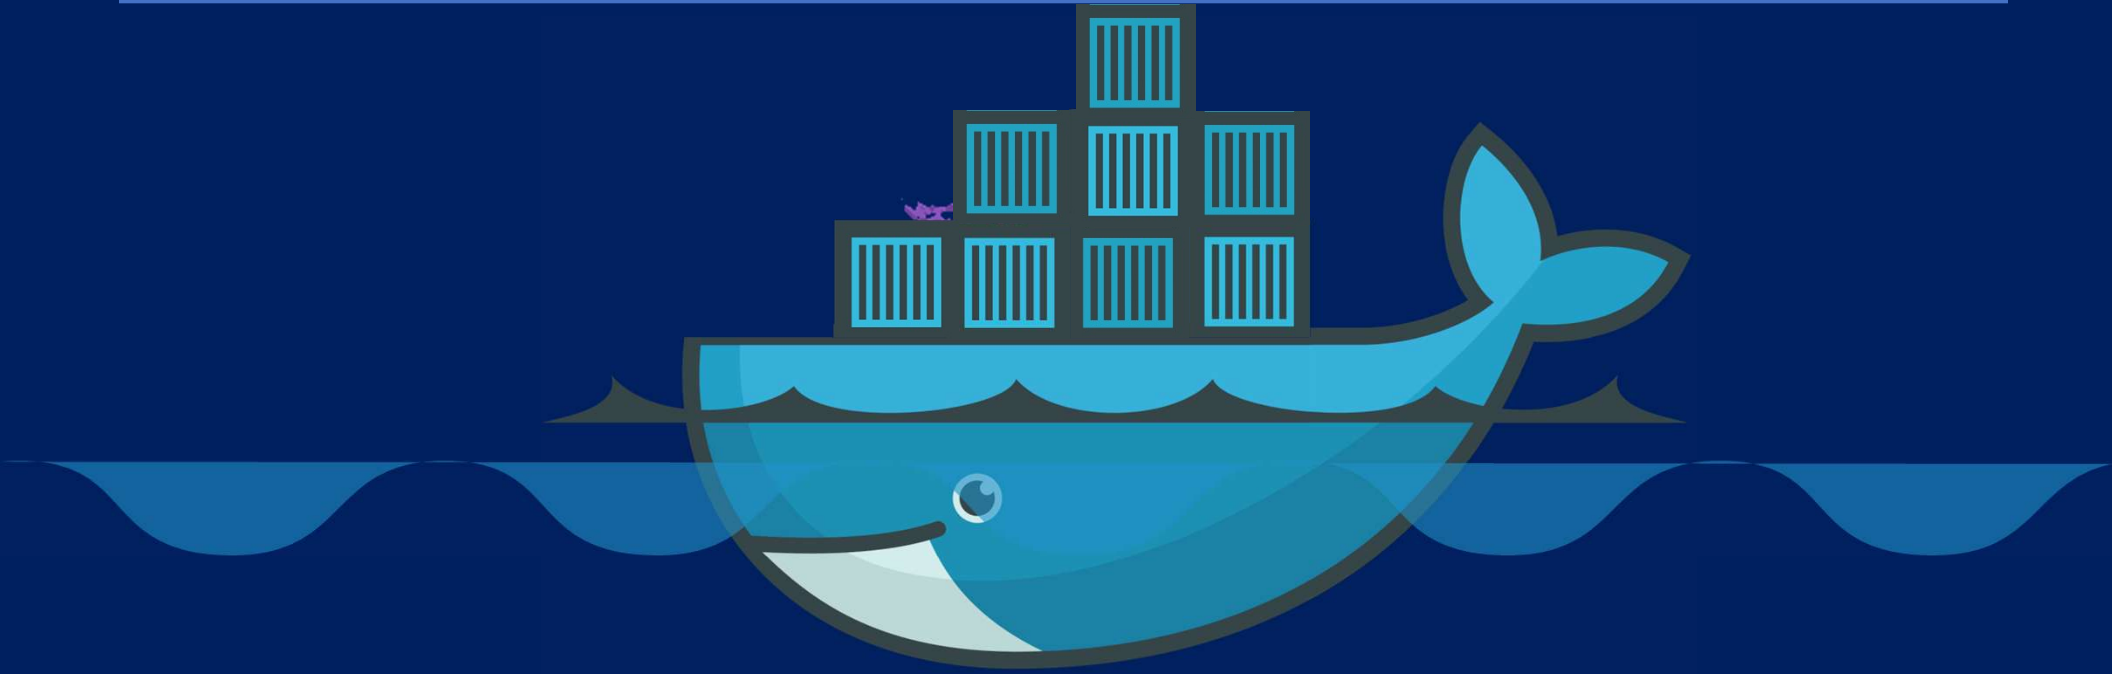
WEEK 9

MACHINE LEARNING OPERATIONS

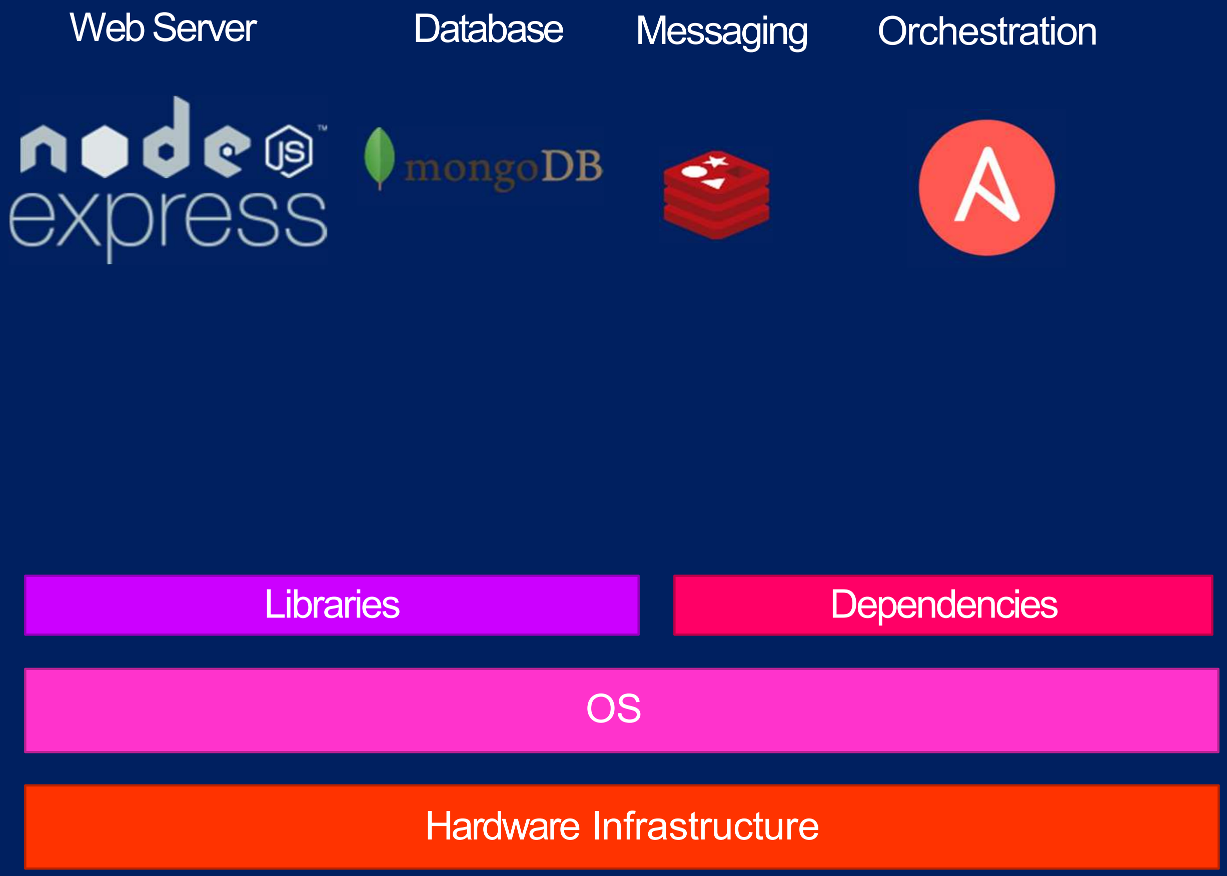
UNLIMITED

Presented by **Asst. Prof. Dr. Tuchsanai Ploysuwan**

Docker Overview



Why do you need docker?



Web Server

Database

Messaging

Orchestration

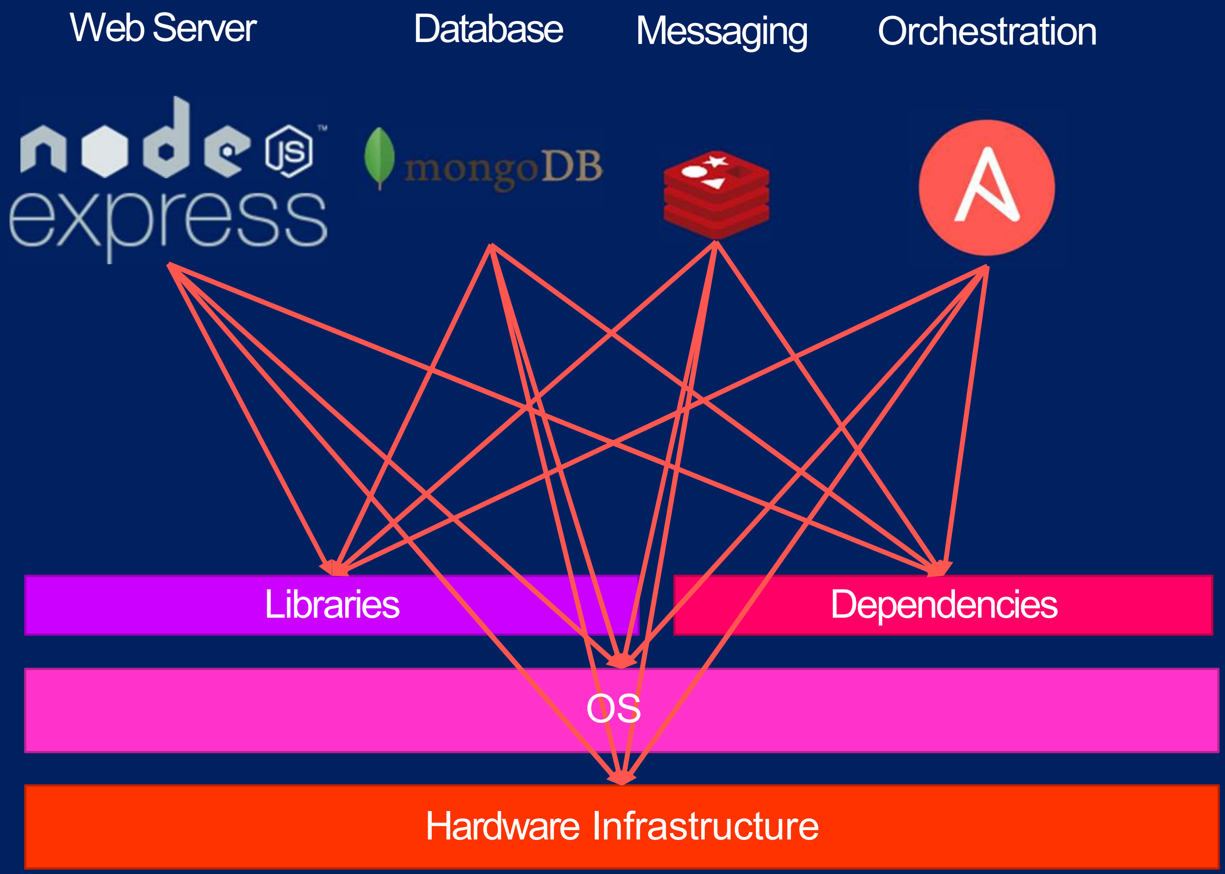
Libraries

Dependencies

OS

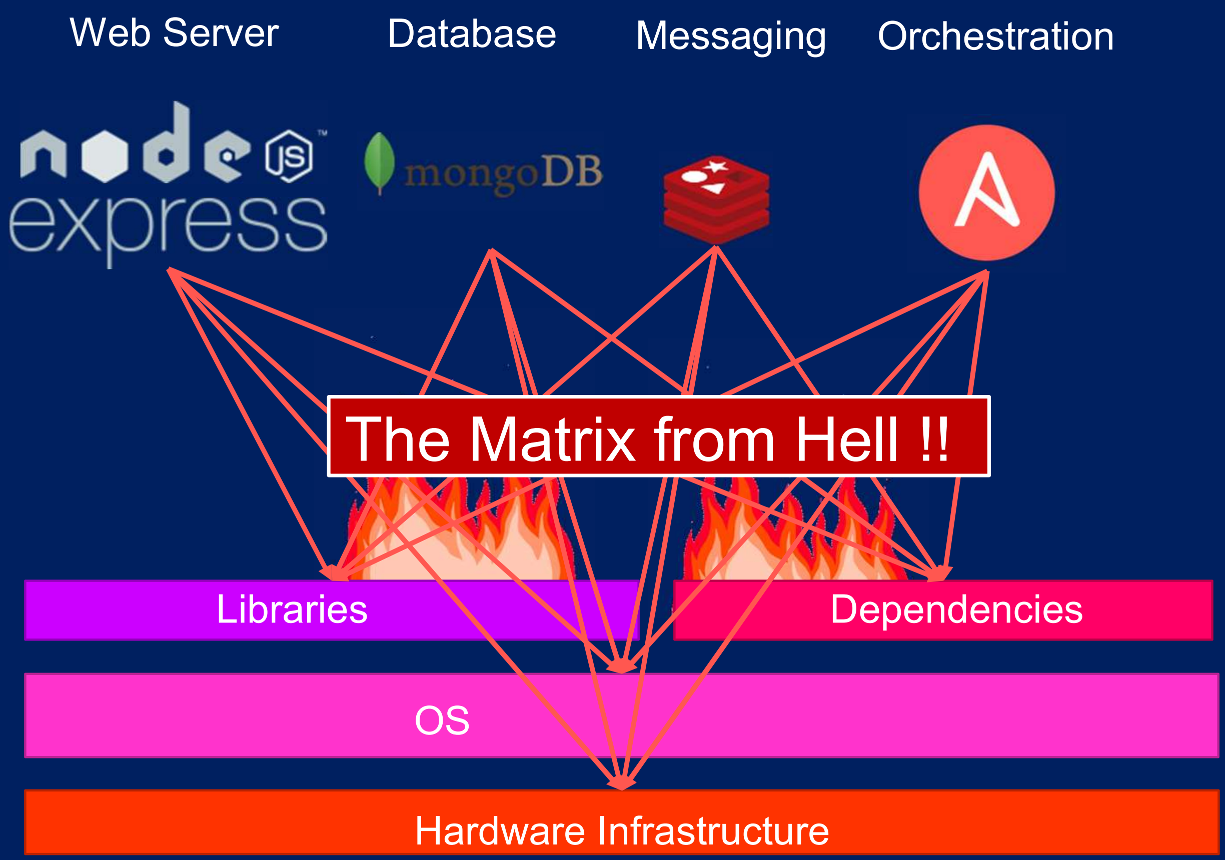
Hardware Infrastructure

Why do you need docker?



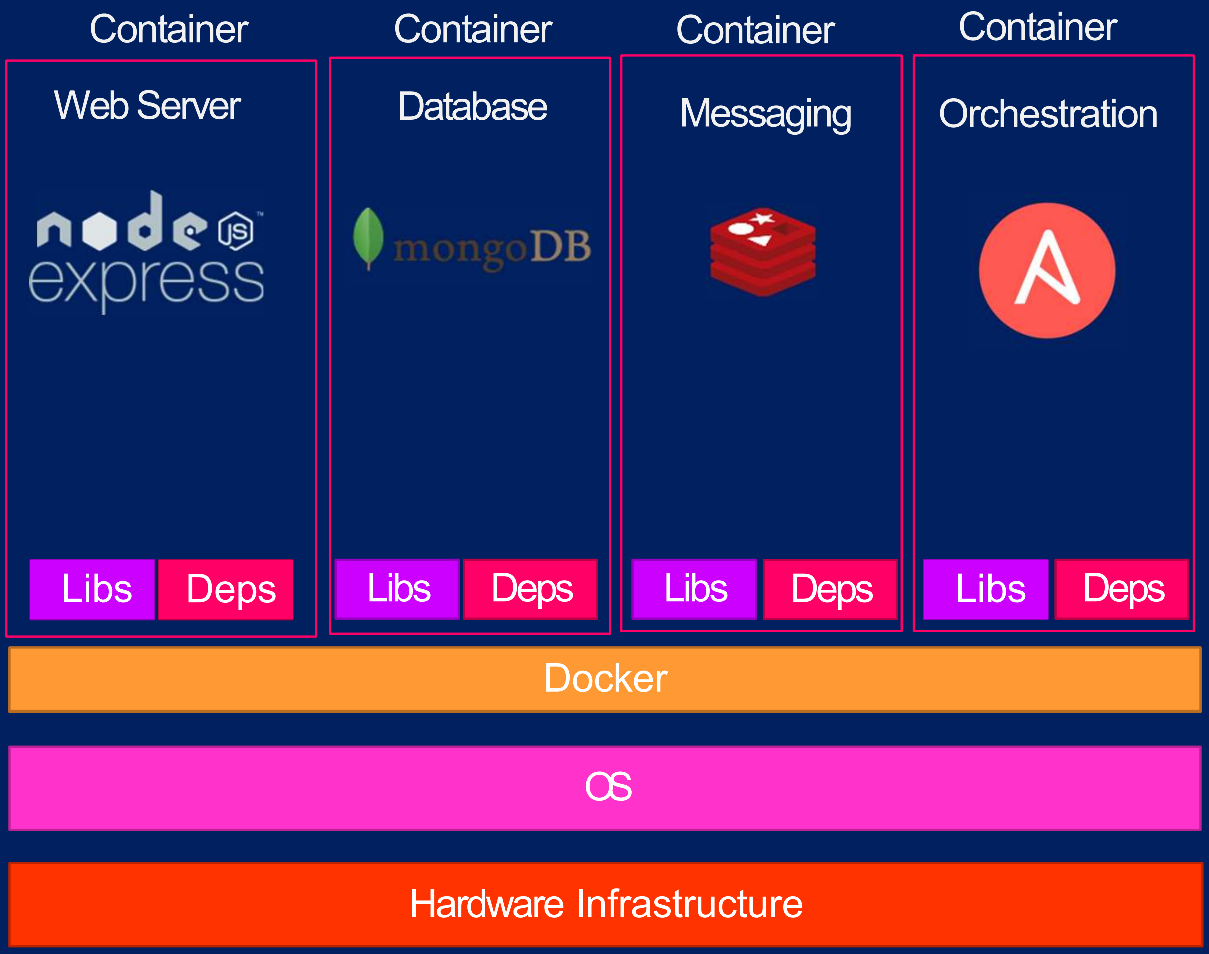
Why do you need docker?

- Compatibility/Dependency
- Long setup time
- Different Dev/Test/Prod environments



What can it do?

- Containerize Applications
- Run each service with its own dependencies in separate containers



What are containers?

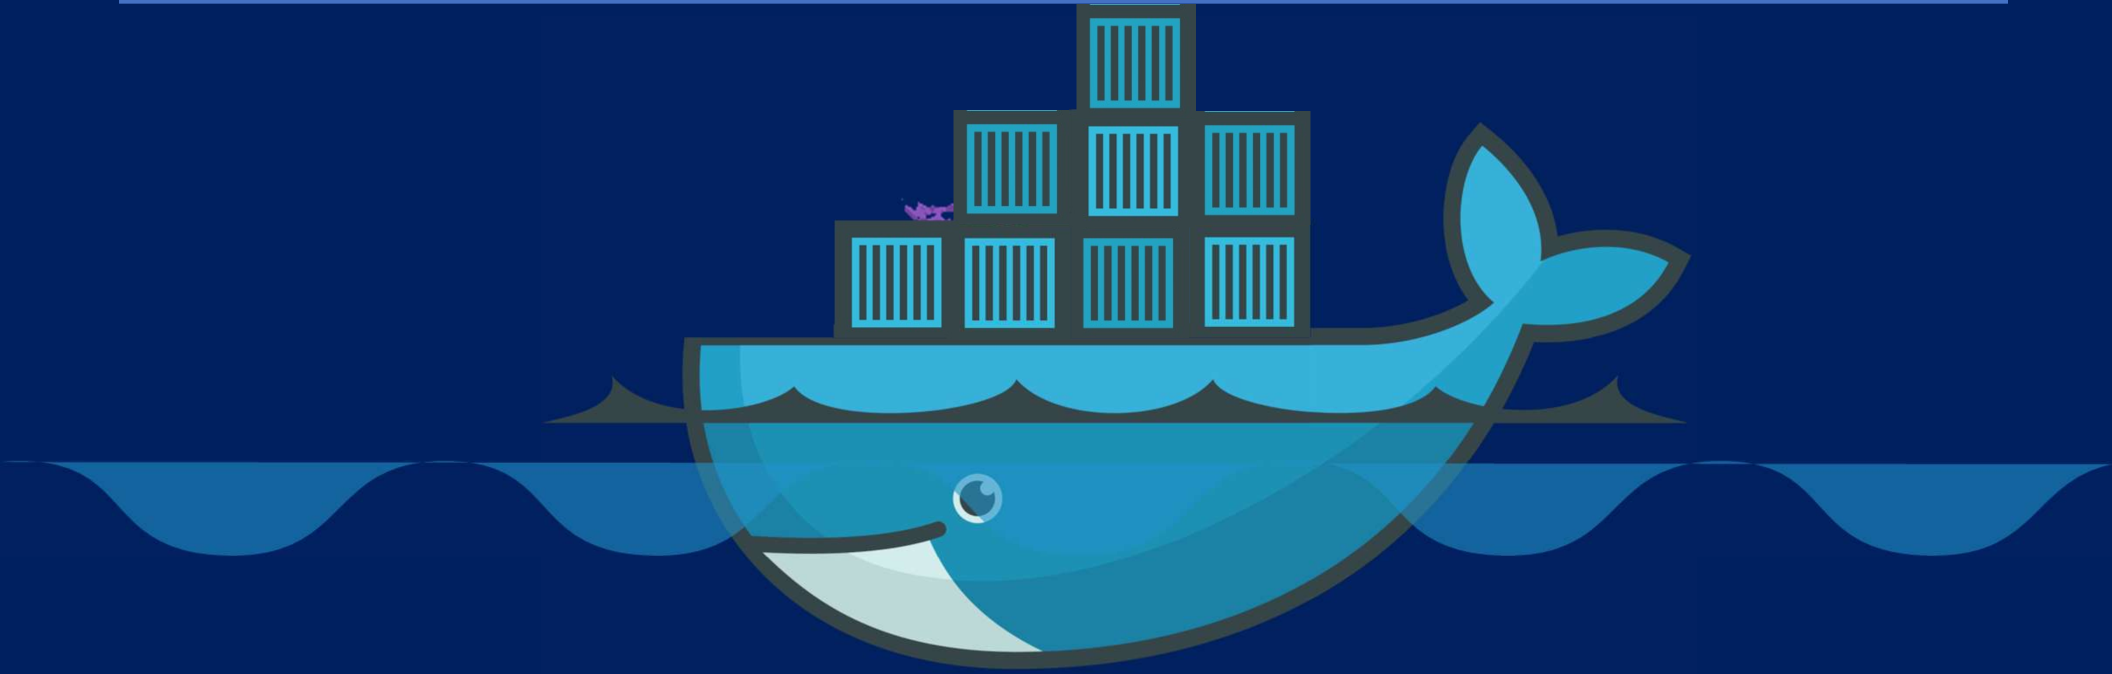
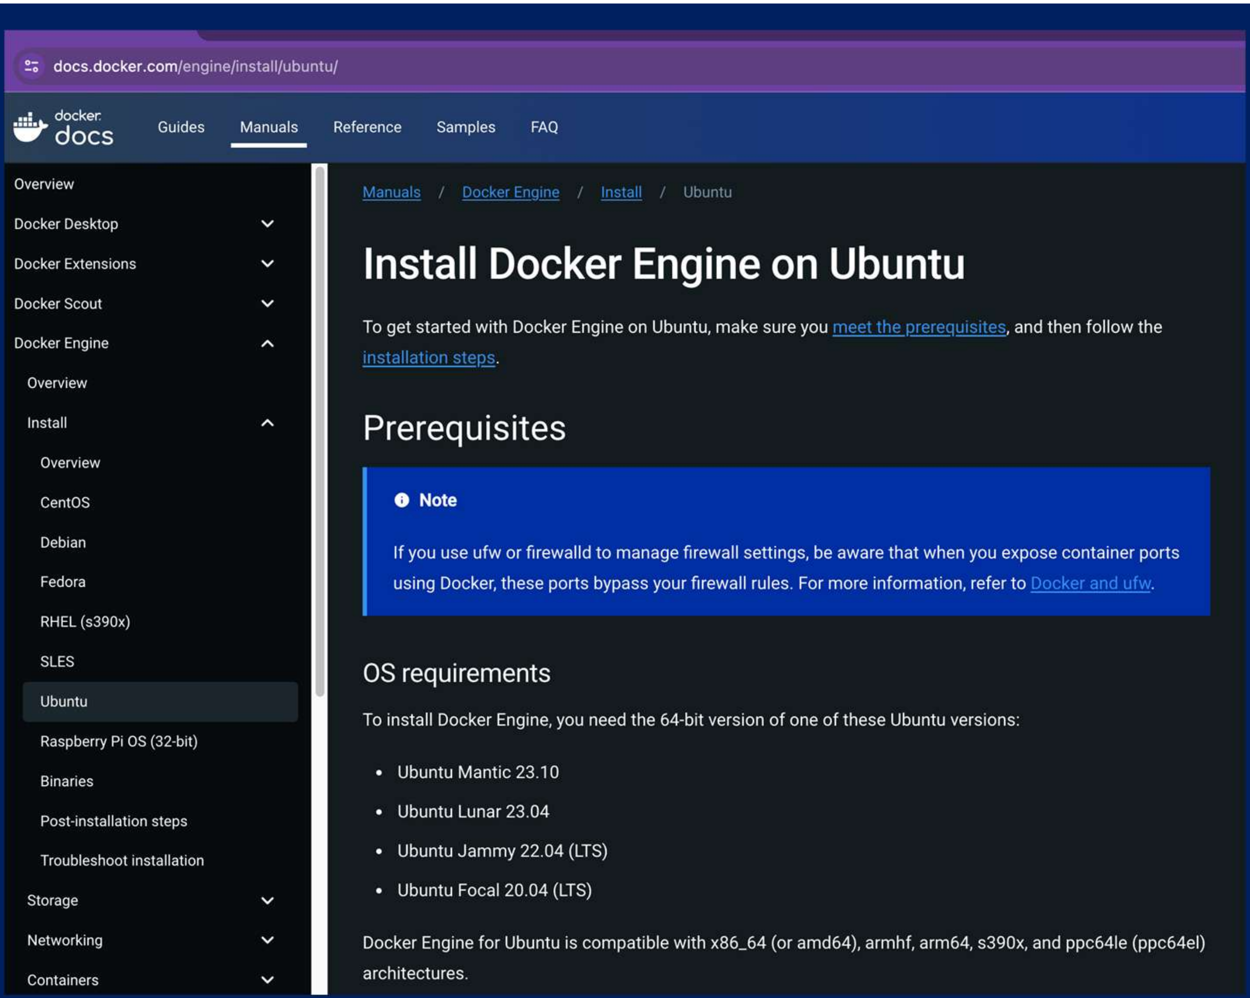
Lab1: Install Docker





Install Docker Engine on Ubuntu

To get started with Docker Engine on Ubuntu, make sure you meet the prerequisites, and then follow the installation steps.

Prerequisites

Note

If you use ufw or firewalld to manage firewall settings, be aware that when you expose container ports using Docker, these ports bypass your firewall rules. For more information, refer to Docker and ufw.

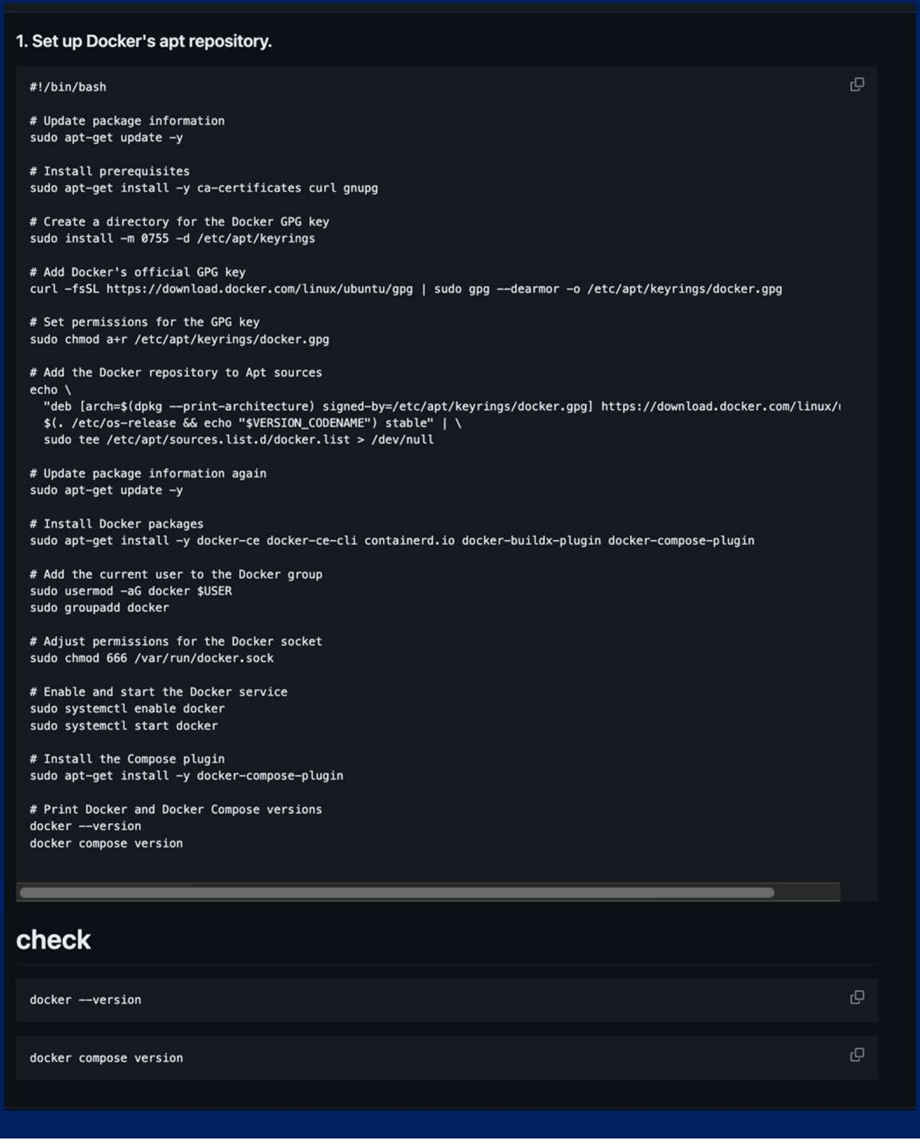
OS requirements

To install Docker Engine, you need the 64-bit version of one of these Ubuntu versions:

- Ubuntu Mantic 23.10
- Ubuntu Lunar 23.04
- Ubuntu Jammy 22.04 (LTS)
- Ubuntu Focal 20.04 (LTS)

Docker Engine for Ubuntu is compatible with x86_64 (or amd64), armhf, arm64, s390x, and ppc64le (ppc64el) architectures.

https://docs.docker.com/engine/install/ubuntu/



1. Set up Docker's apt repository.

```bash
#!/bin/bash

# Update package information
sudo apt-get update -y

# Install prerequisites
sudo apt-get install -y ca-certificates curl gnupg

# Create a directory for the Docker GPG key
sudo install -m 0755 -d /etc/apt/keyrings

# Add Docker's official GPG key
curl -fsSL https://download.docker.com/linux/ubuntu/gpg | sudo gpg --dearmor -o /etc/apt/keyrings/docker.gpg

# Set permissions for the GPG key
sudo chmod a+r /etc/apt/keyrings/docker.gpg

# Add the Docker repository to Apt sources
echo \
  "deb [arch=$(dpkg --print-architecture) signed-by=/etc/apt/keyrings/docker.gpg] https://download.docker.com/linux/
  $(. /etc/os-release && echo "$VERSION_CODENAME") stable" | \
  sudo tee /etc/apt/sources.list.d/docker.list > /dev/null

# Update package information again
sudo apt-get update -y

# Install Docker packages
sudo apt-get install -y docker-ce docker-ce-cli containerd.io docker-buildx-plugin docker-compose-plugin

# Add the current user to the Docker group
sudo usermod -aG docker $USER
sudo groupadd docker

# Adjust permissions for the Docker socket
sudo chmod 666 /var/run/docker.sock

# Enable and start the Docker service
sudo systemctl enable docker
sudo systemctl start docker

# Install the Compose plugin
sudo apt-get install -y docker-compose-plugin

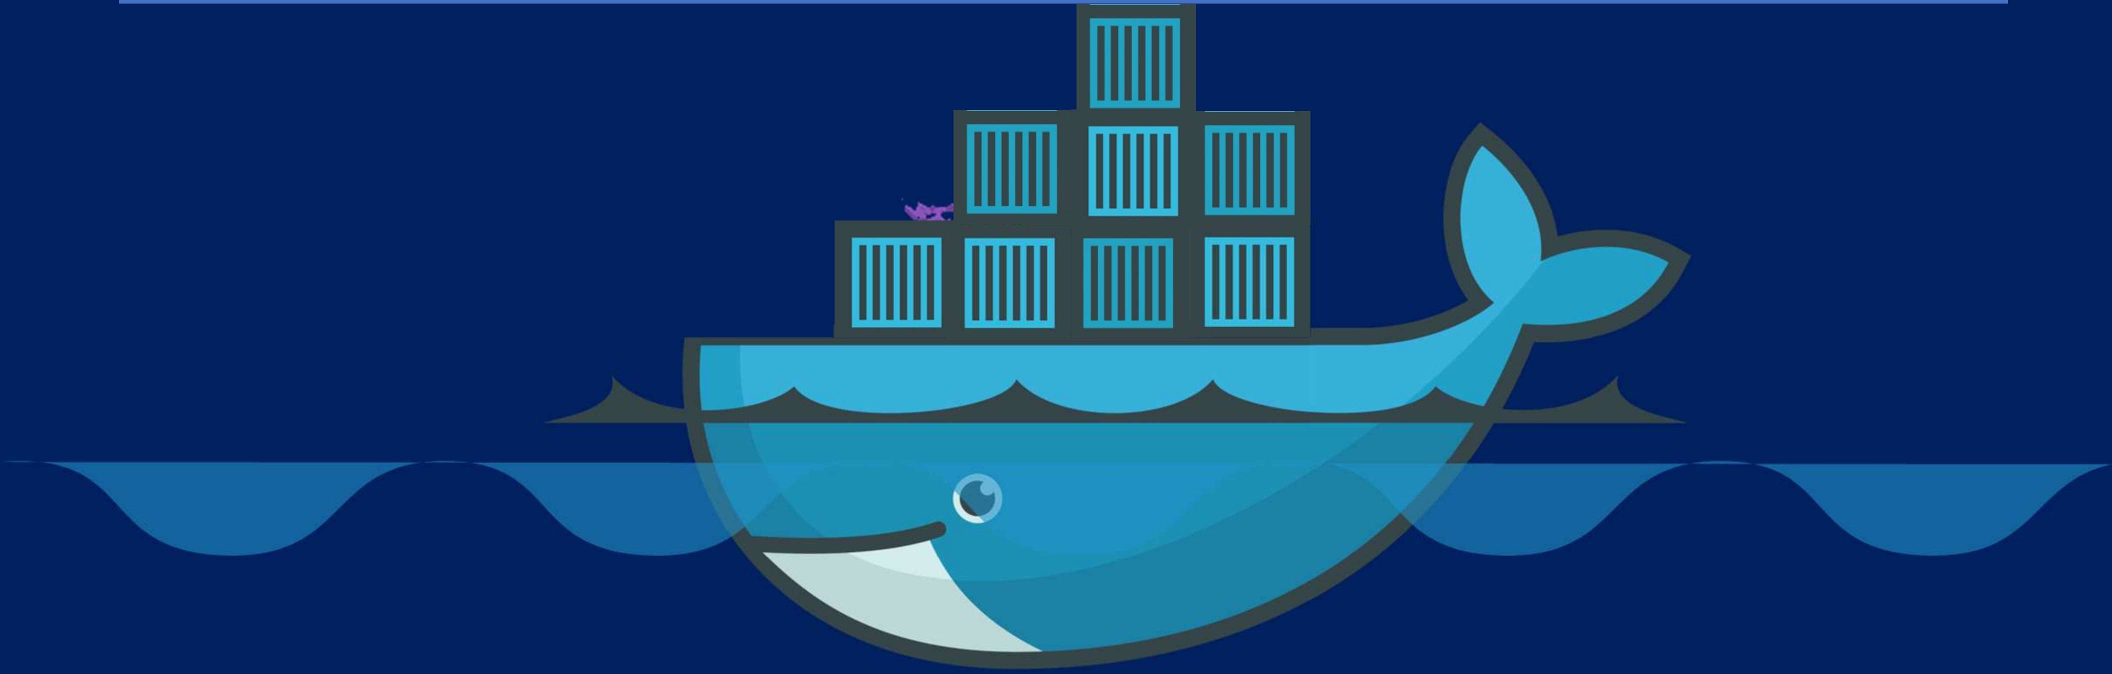
# Print Docker and Docker Compose versions
docker --version
docker compose version
```

check

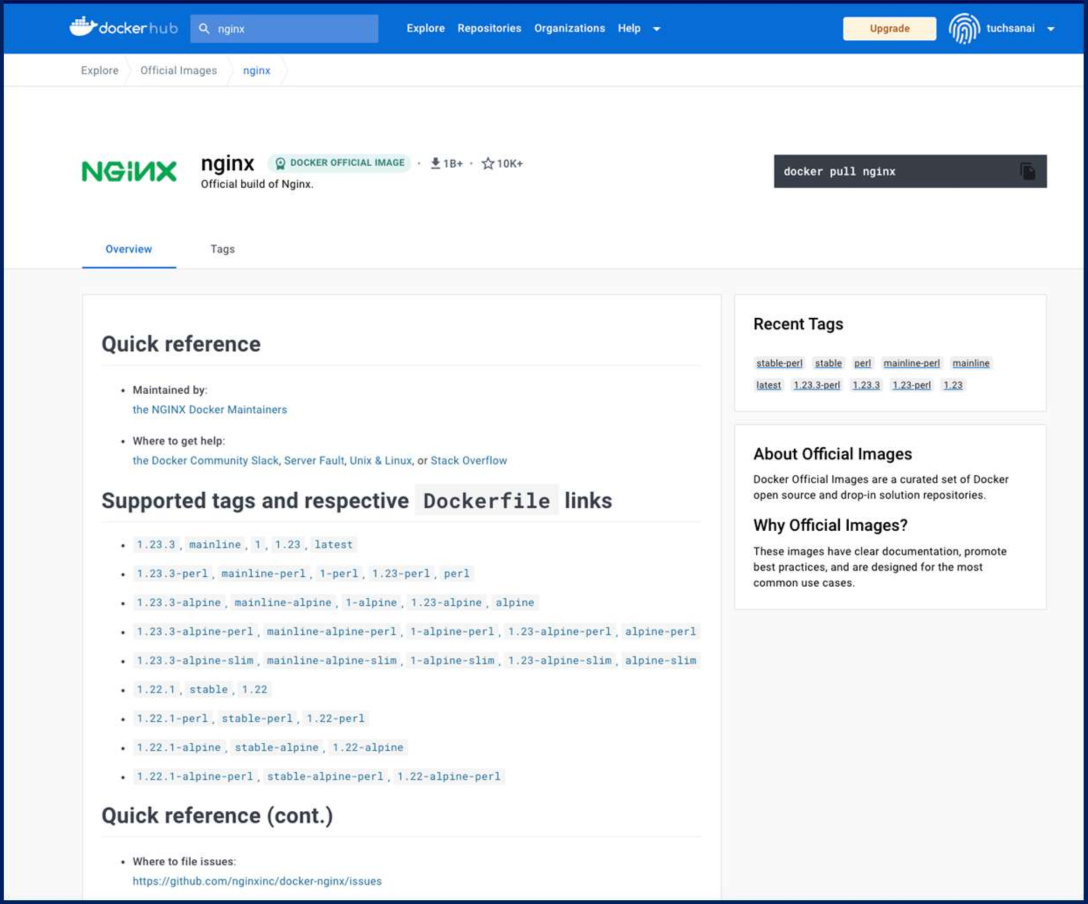
```
docker --version
```

```
docker compose version
```

LAB 2 : Docker Run



Docker Registry



nginx

DOCKER OFFICIAL IMAGE · 1B+ · ☆ 10K+

Official build of Nginx.

```
docker pull nginx
```

Quick reference

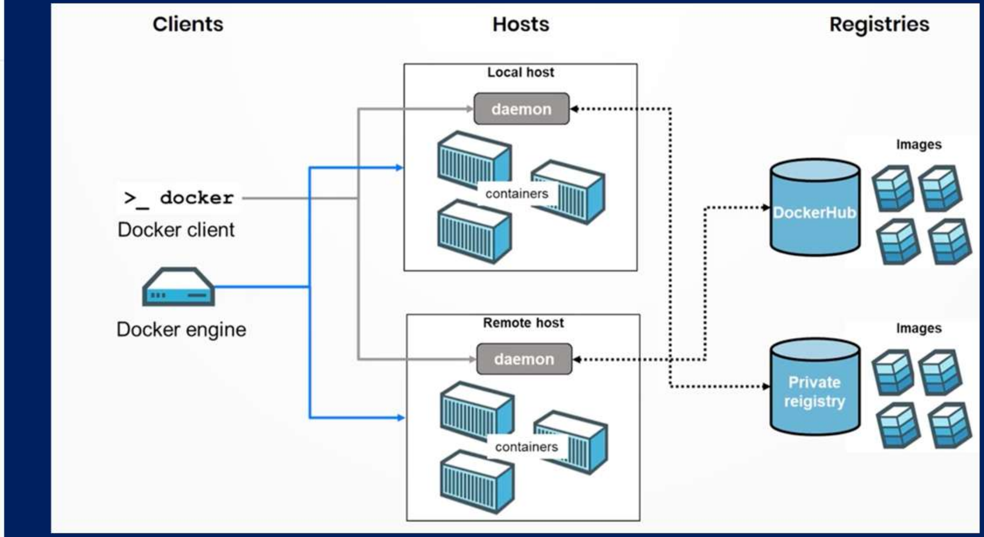
About Official Images

Docker Official Images are a curated set of Docker open source and drop-in solution repositories.

Why Official Images?

These images have clear documentation, promote best practices, and are designed for the most common use cases.

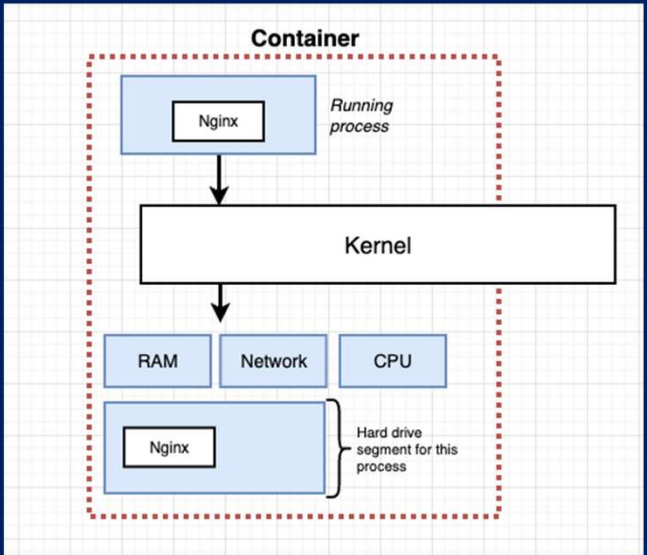


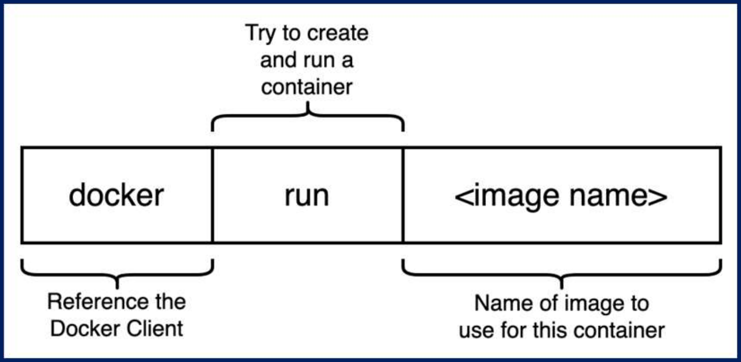
Run – start a container

```
docker run nginx
```

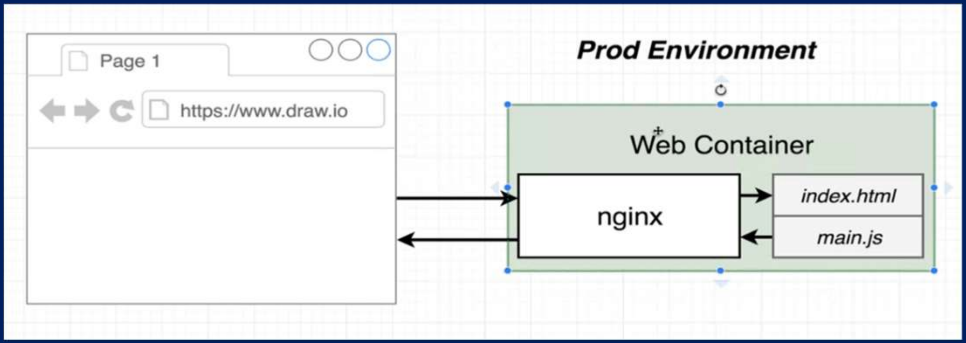
```
Unable to find image 'nginx:latest' locally latest: Pulling from
library/nginx fc7181108d40: Already exists
d2e987ca2267:        Pull        complete
0b760b431b11: Pull complete Digest:
sha256:96fb261b66270b900ea5a2c17a26abbfabe95506e73c3a3c65869a6dbe83223a
```

Status: Downloaded newer image for nginx:latest





Try to create and run a container
docker
run
<image name>
Reference the Docker Client
Name of image to use for this container



```
docker run ubuntu
```

```
docker ps
```

```
CONTAINER ID        IMAGE         COMMAN        CREATED          STATUS                       PORTS
                                  D
```

```
docker ps -a
```

```
CONTAINER ID        IMAGE         COMMAND       CREATED          STATUS                       PORTS
45aacca36850        ubuntu        "/bin/bash"   43 seconds ago   Exited (0) 41 seconds ago
```

Run – with command

```
docker run busybox echo hi there
```

```
814c8b675ca3: Already exists
Digest: sha256:c118f538365369207c12e5794c3cbfb7b042d950af590ae6c287ede74f29b7d4
Status: Downloaded newer image for busybox:latest

newer image for nginx:latest
```

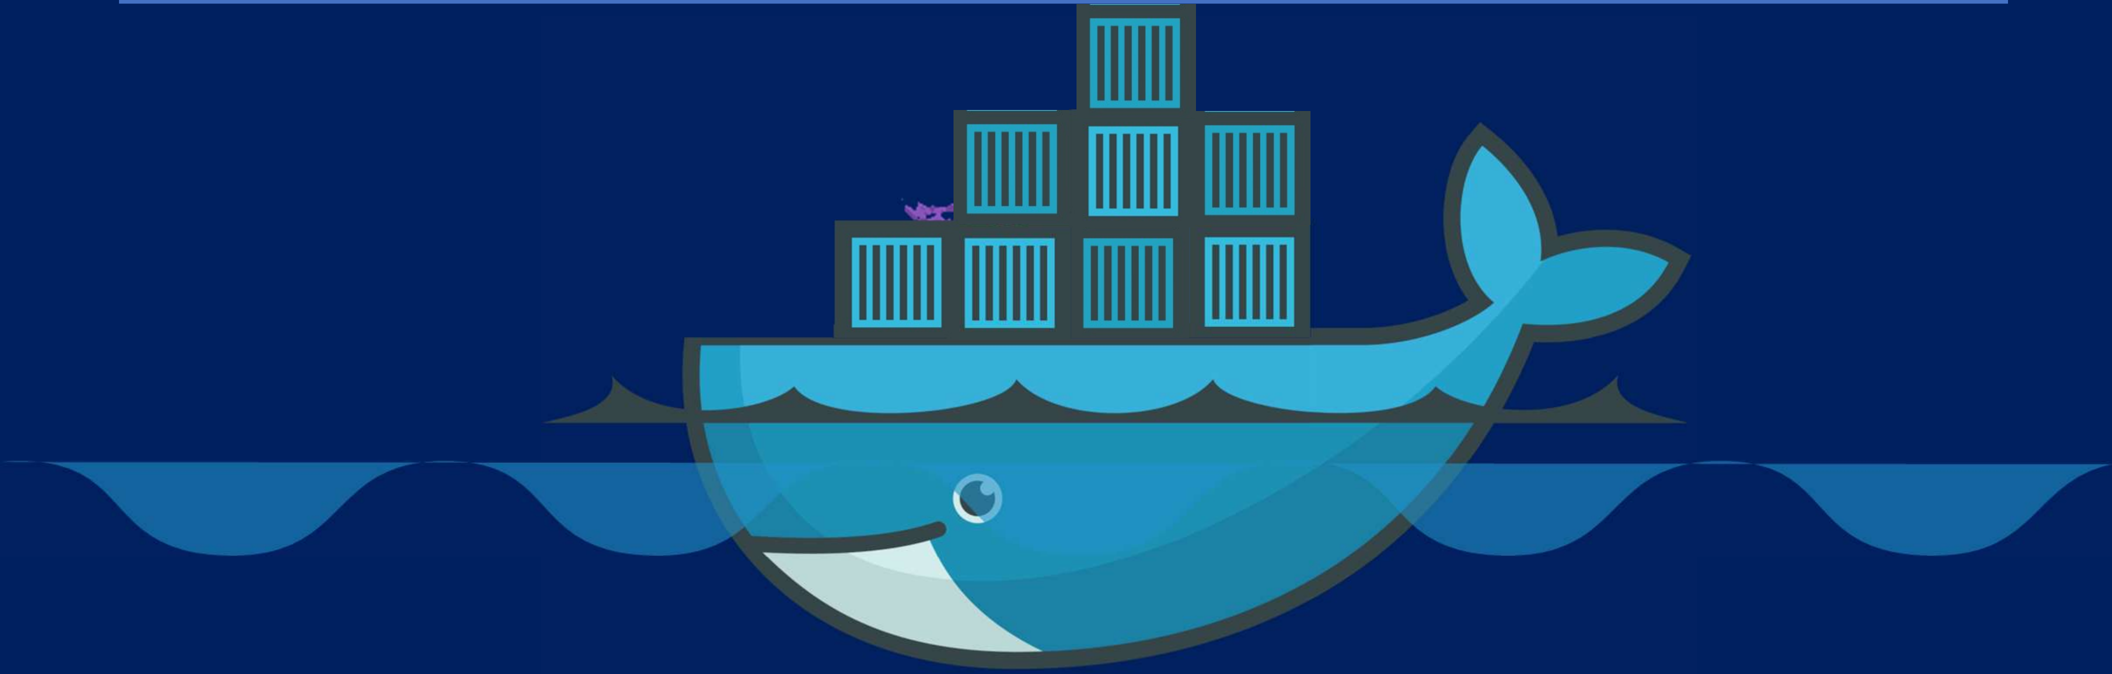
LAB 3: Docker Port Mapping



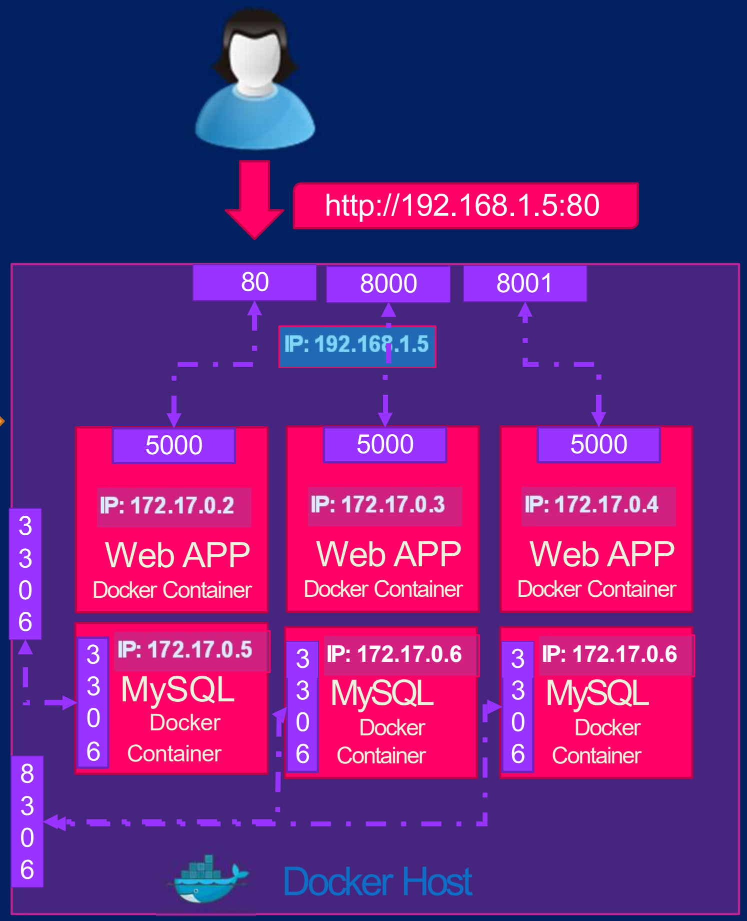
Run – PORT mapping

```
docker run myname/webapp
```

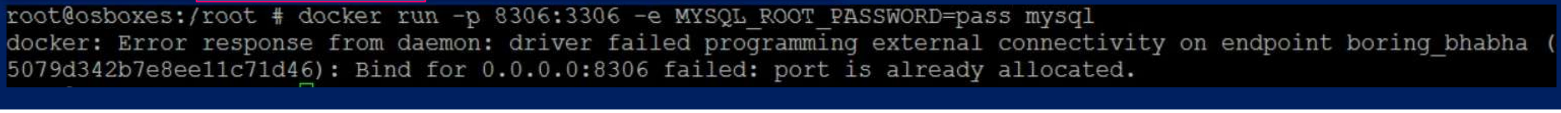
```
* Running on http://0.0.0.0:5000/ (Press CTRL+C to quit)
```

http://172.17.0.2:5000

Internal IP

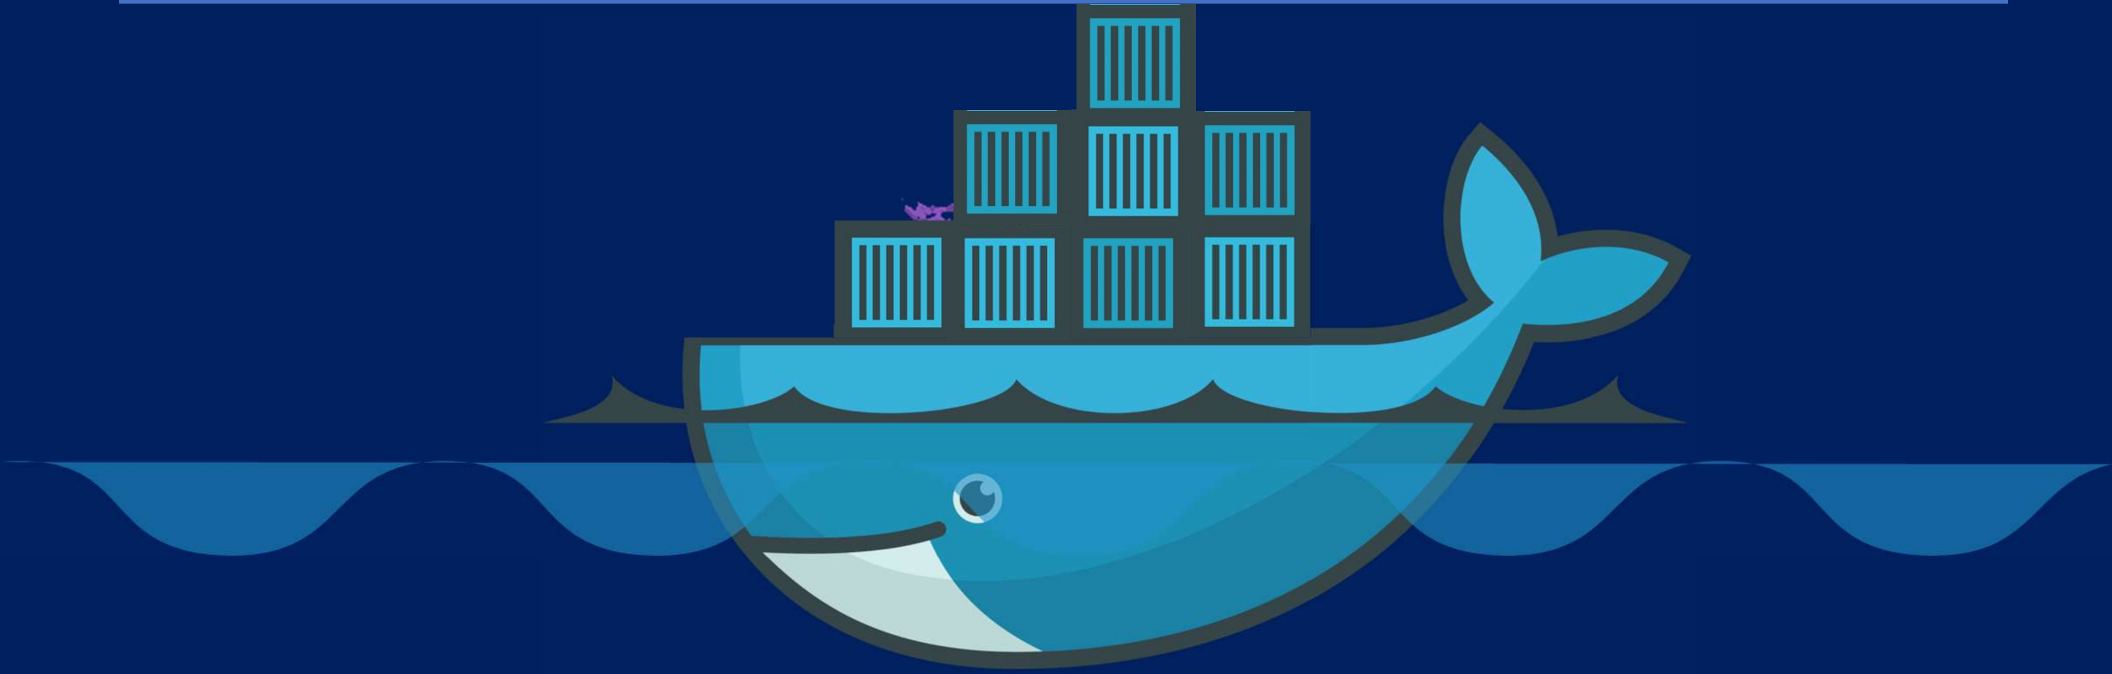


```
docker run –p 80:5000 myname/simple-webapp
docker run –p 8000:5000 myname/simple-webapp
docker run –p 8001:5000 myname/simple-webapp
docker run –p 3306:3306 mysql
docker run –p 8306:3306 mysql
docker run –p 8306:3306 mysql
```

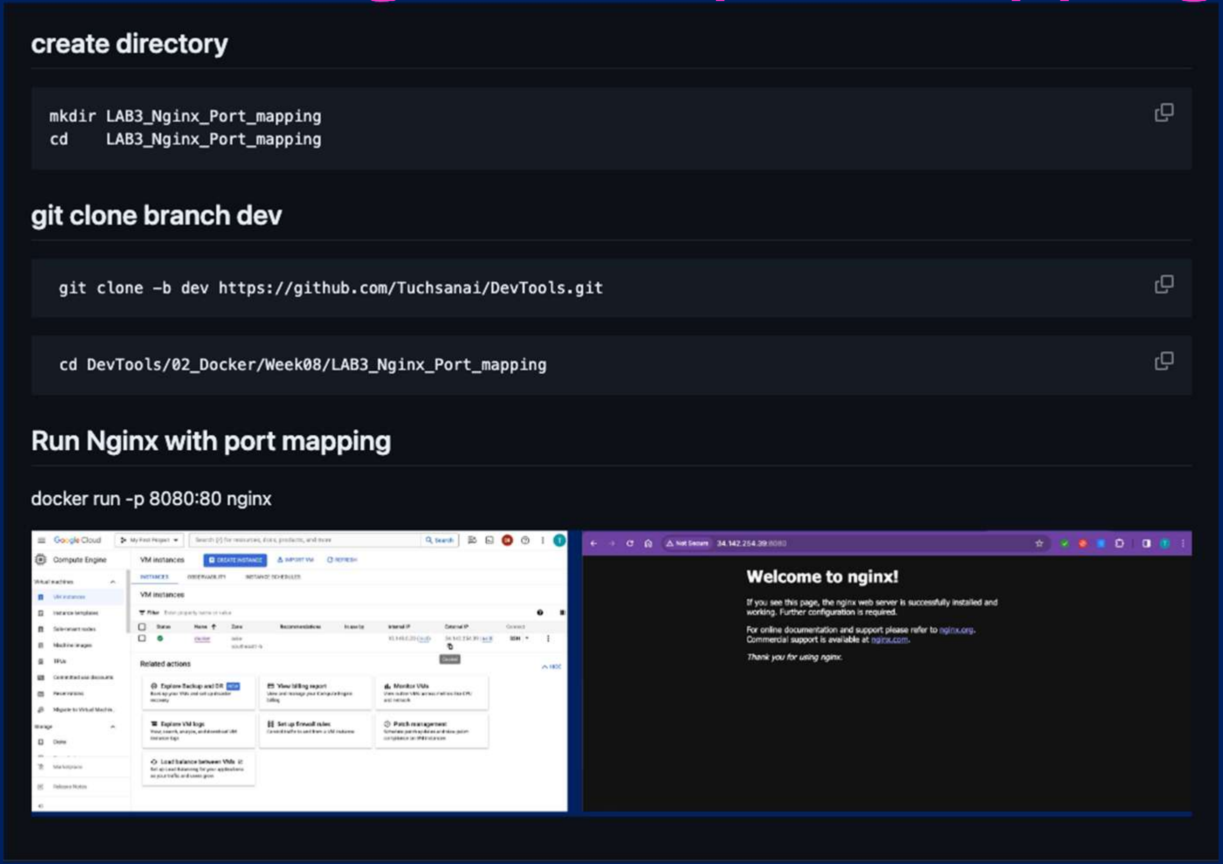


```
root@osboxes:/root # docker run -p 8306:3306 -e MYSQL_ROOT_PASSWORD=pass mysql
docker: Error response from daemon: driver failed programming external connectivity on endpoint boring_bhabha (
5079d342b7e8ee11c71d46): Bind for 0.0.0.0:8306 failed: port is already allocated.
```

Docker run from Repository



LAB 3 : Run Nginx with port mapping



create directory

```
mkdir LAB3_Nginx_Port_mapping
cd    LAB3_Nginx_Port_mapping
```

git clone branch dev

```
git clone -b dev https://github.com/Tuchsanai/DevTools.git
```

```
cd DevTools/02_Docker/Week08/LAB3_Nginx_Port_mapping
```

Run Nginx with port mapping

docker run -p 8080:80 nginx

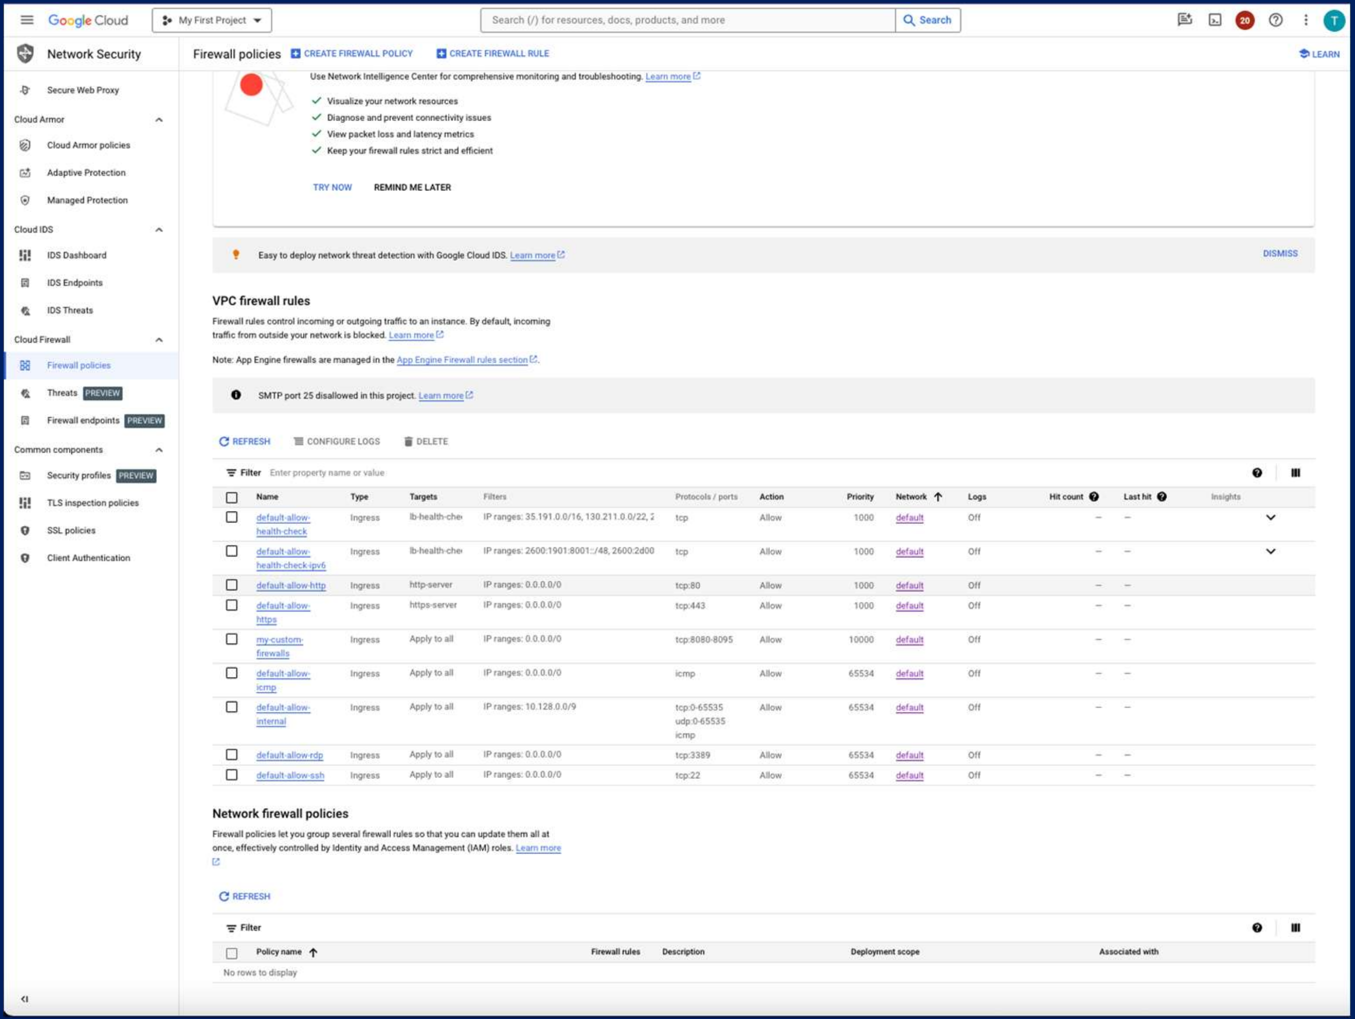
Welcome to nginx!

If you see this page, the nginx web server is successfully installed and working. Further configuration is required.

For online documentation and support please refer to nginx.org.
Commercial support is available at nginx.com.

Thank you for using nginx.

Firewall policies



Use Network Intelligence Center for comprehensive monitoring and troubleshooting. Learn more

- ✓ Visualize your network resources
- ✓ Diagnose and prevent connectivity issues
- ✓ View packet loss and latency metrics
- ✓ Keep your firewall rules strict and efficient

TRY NOW   REMIND ME LATER

Easy to deploy network threat detection with Google Cloud IDS. Learn more   DISMISS

VPC firewall rules

Firewall rules control incoming or outgoing traffic to an instance. By default, incoming traffic from outside your network is blocked. Learn more

Note: App Engine firewalls are managed in the App Engine Firewall rules section.

SMTP port 25 disallowed in this project. Learn more
