

MACHINE LEARNING OPERATIONS

Presented by **Asst. Prof. Dr. Tuchsanai Ploysuwan**

WEEK 5

CHRISTMAS

Google Cloud

To apply for Google Cloud, follow these steps

The screenshot shows the Google Cloud homepage with a dark header. The main heading is "Solve real business challenges on Google Cloud". Below it are two buttons: "Get started for free" and "Contact sales". A large central section is titled "Run workloads for free" and lists three options: "20+ free products for all customers", "\$300 in free credits for new customers", and "Start deploying pre-built solutions free". Each option has a detailed description below it. Below this section is a horizontal bar with colored segments (red, blue, green, yellow) followed by the heading "Free Tier products". Under this heading are four boxes: "Compute Engine" (scalable, high-performance virtual machines, 1 e2-micro instance per month), "Cloud Storage" (best-in-class performance, reliability, and pricing for all your storage needs, 5 GB-months Standard Storage), "BigQuery" (fully managed, petabyte scale, analytics data warehouse, 1TB queries per month), and "Google Kubernetes Engine" (one-click container orchestration via Kubernetes clusters, managed by Google, One Autopilot or Zonal cluster per month). Each box has a right-pointing arrow.

Google Cloud Overview Solutions Products Pricing Resources Contact Us

Solve real business challenges on Google Cloud

Get started for free Contact sales

Run workloads for free

20+ free products for all customers

All customers get [free hands-on experience](#) with popular products, including Compute Engine and Cloud Storage, [up to monthly limits](#).

\$300 in free credits for new customers

New customers get [\\$300 in free credits](#) to fully explore and conduct an assessment of Google Cloud. You won't be charged until you upgrade.

Start deploying pre-built solutions free

New customers get [\\$300 in free credits](#) on signup to use on deploying a dynamic website, launching a VM, building a three tier web app, and more [pre-built solutions templates](#).

Free Tier products

There is no charge to use these products up to their specified [free usage limit](#). The free usage limit does not expire, but is subject to change. Available for eligible customers.

Compute Engine
Scalable, high-performance virtual machines.
1 e2-micro instance per month

Cloud Storage
Best-in-class performance, reliability, and pricing for all your storage needs.
5 GB-months Standard Storage

BigQuery
Fully managed, petabyte scale, analytics data warehouse.
1TB queries per month

Google Kubernetes Engine
One-click container orchestration via Kubernetes clusters, managed by Google.
One Autopilot or Zonal cluster per month

การสมัครใช้บริการ Google Cloud สามารถทำได้โดยขั้นตอนง่าย ๆ ดังนี้:

1. **เข้าไปที่เว็บไซต์ของ Google Cloud Platform (GCP)**:

- เปิดเบราว์เซอร์และเข้าไปที่ [\[https://cloud.google.com/\]](https://cloud.google.com/) (<https://cloud.google.com/>).
- คลิกที่ปุ่ม "Get started for free" หรือ "ลงทะเบียนใช้งานฟรี" ที่อยู่บนหน้าเว็บไซต์.

2. **ลงทะเบียนหรือเข้าสู่ระบบด้วยบัญชี Google**:

- ถ้าคุณมีบัญชี Google อยู่แล้ว (เช่น Gmail), คุณสามารถใช้บัญชีเดิมเข้าสู่ระบบ.
- ถ้าคุณยังไม่มีบัญชี Google, คุณจะต้องสร้างบัญชีใหม่.

3. **กรอกข้อมูลการลงทะเบียน**:

- คุณจะต้องกรอกข้อมูลส่วนตัว, เช่น ชื่อ, นามสกุล, และข้อมูลการติดต่อ.
- ทำการยืนยันอีเมลที่ใช้สมัคร.

4. **กรอกข้อมูลการเงิน (เพื่อการยืนยันตัวตน)**:

- แม้ว่า GCP จะเสนอเครดิตฟรีเมื่อคุณเริ่มใช้งาน, แต่ Google ยังคงต้องการข้อมูลบัตรเครดิตหรือบัญชีธนาคารเพื่อการยืนยันตัวตน.
- คุณจะไม่ถูกเรียกเก็บเงินจนกว่าจะใช้เครดิตที่ให้มาหมด.

5. **อ่านและยอมรับข้อกำหนดการใช้งาน**:

- ตรวจสอบและยอมรับข้อกำหนดและเงื่อนไขการให้บริการของ Google Cloud.

6. **การตั้งค่าโครงการและการใช้งาน**:

- หลังจากลงทะเบียนเสร็จสิ้น, คุณสามารถเริ่มต้นสร้างโครงการและใช้งานบริการต่าง ๆ ใน Google Cloud.

7. **การยืนยันตัวตนและการเริ่มต้นใช้งาน**:

- Google อาจทำการยืนยันตัวตนผ่านโทรศัพท์หรือข้อความ SMS.
- หลังจากยืนยันแล้ว, คุณสามารถเข้าใช้งาน Google Cloud Console และเริ่มต้นใช้งานได้ทันที.

LAB 1. Create a Project for GCP

1. Google Cloud Platform. Projects allow you to organize all the resources in your account easily. Every time you create a compute, storage, or network resource,

2. you must assign it to a Project. Projects also contain their own unique set of users, APIs, and billing account information.

The screenshot shows the Google Cloud Welcome page. At the top, there is a navigation bar with the Google Cloud logo, a "Select a project" button (circled in red), a search bar, and various icons. Below the navigation bar, the word "Welcome" is displayed with a small cloud icon. A message encourages users to "Create or select a project to get up and running with Google Cloud." It includes a link to "Learn more about projects". Below this, there are two tabs: "Dashboard" (underlined) and "Recommendations". A "Try Gemini" button with a right-pointing arrow is visible. Under the "Quick access" section, there are eight cards: API APIs & Services, IAM & Admin, Billing, Compute Engine, Cloud Storage, BigQuery, VPC network, and Kubernetes Engine. At the bottom left, there is a "VIEW ALL PRODUCTS" button.

This screenshot shows a "Select a project" dialog box overlaid on the Google Cloud Welcome page. The dialog has a title "Select a project" and a "NEW PROJECT" button (circled in red). It includes a search bar labeled "Search projects and folders" and three filter tabs: RECENT, STARRED, and ALL. A table lists one project: "tuchsanai" (Name), "88599861549" (ID). At the bottom right of the dialog is a "CANCEL" button.

The image shows the Google Cloud Home page. At the top left, the "Google Cloud" logo is circled in red. The top navigation bar includes "My First Project", a search bar, and various status indicators. A large, stylized red number "2" is overlaid on the page, pointing towards a callout box. The callout box contains text about Gemini, a multimodal model from Google DeepMind available in Vertex AI. Below this section, there's a heading "Recommended based on your interest in General ▾". Under this heading, there are three "Pre-built solution templates": "Deploy a three-tier web app", "Deploy load balanced managed VMs", and "Create a data warehouse with BigQuery". Each template has a brief description and a small icon.

tuchsanai@instance-1:~$
```

1. จำกัดชื่อผู้ใช้ user:tuchsanai

Step 1: Generate the SSH Key Pair

1. Open a Terminal: On your local machine, open a terminal window.
2. Navigate to the Desired Directory: Use the `cd` command to navigate to the directory where you want to save the key. If you're already in the desired directory, you can skip this step.
3. Generate the SSH Key Pair: Use the `ssh-keygen` command to generate a new SSH key pair. The key will be saved in the current directory with the name `mykey`. Run the following command:

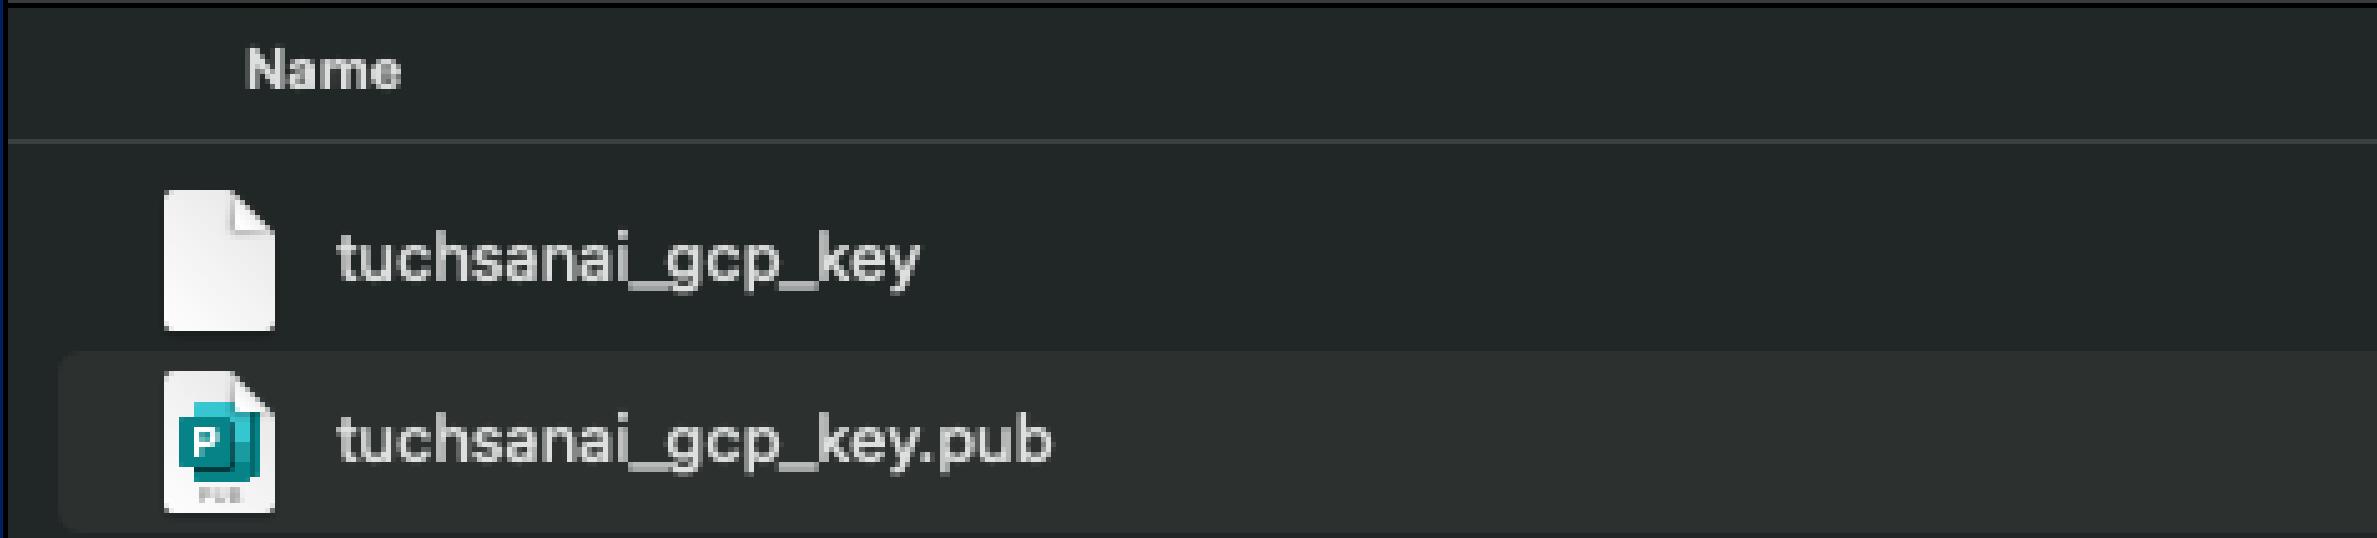

```
mkdir mykey
cd mykey
```

```
ssh-keygen -t rsa -b 2048 -C "tuchsanai" -f tuchsanai_gcp_key
```

- `-t rsa`: Specifies the type of key to create, in this case, RSA.
- `-b 2048`: Specifies the number of bits in the key, in this case, 2048 bits.
- `-C "username"`: Adds a comment to the key, here it is the username.
- `-f tuchsanai_gcp_key`: Specifies the filename and path of the key file.

2. ทำการสร้าง ssh key โดยใช้ user ของตัวเองดังรูป
pa. สร้าง key ให้สร้างใน local com นะครับ

```
(base) tuchsanai@Tuchsanais-MacBook-Pro mykey % ssh-keygen -t rsa -b 2048 -C "tuchsanai" -f tuchsanai_gcp_key
Generating public/private rsa key pair.
Enter passphrase (empty for no passphrase):
Enter same passphrase again:
Your identification has been saved in tuchsanai_gcp_key
Your public key has been saved in tuchsanai_gcp_key.pub
The key fingerprint is:
SHA256:c/LRSpAWrVO8GrZm5Aa5QP6V4CcmLQXKXcVb4cowNEI tuchsanai
The key's randomart image is:
+---[RSA 2048]---+
| .E.+ooo.. |
| . o.+o..+= |
| oo.+oo+*.. |
| = B=@o.. |
| * XS=+ . |

tuchsanai
2

```

4. เมื่อทำการเปิด tuchsanai_gcp_key.pub ดูจะได้
ประมาณนี้

5. นำ public key : tuchsanai_gcp_key.pub มาใส่
****ในช่องสุดท้าย****โดยให้บันทึกแล้วกด enter
จากนั้นให้กด save ด้านล่าง

Step 2: Connect to a GCP Instance

1. **Find the External IP of Your Instance:** In the GCP console, go to the "VM instances" page and find the external IP address of the instance you want to connect to.

2. **Connect via SSH:** Use the SSH command to connect to the instance. Replace `[EXTERNAL_IP]` with the actual IP address:

```
ssh -i username.private username@[EXTERNAL_IP]
```

- `-i username.private` : Specifies the private key file for authentication.
- `username@[EXTERNAL_IP]` : The username and IP address of the GCP instance.

Following these steps, you should be able to generate an SSH key in your specified directory and use it to connect to your GCP instances securely. Remember to keep the private key (`mykey`) secure and private.

VM instances

3

Store and retrieve your data Get started by creating a bucket – a container where you can organize and control access to your data and files in Cloud Storage.

CREATE BUCKET TAKE QUICKSTART

Google Cloud tuchsanai Search (/) for resources, docs, products, and more

Cloud Storage Create a bucket

Overview NEW Buckets Monitoring Settings

Get Started Name: lab_mlops_01xxv

Choose where to store your data This choice defines the geographic placement of your data and affects cost, performance, and availability. Cannot be changed later. [Learn more](#)

Location type

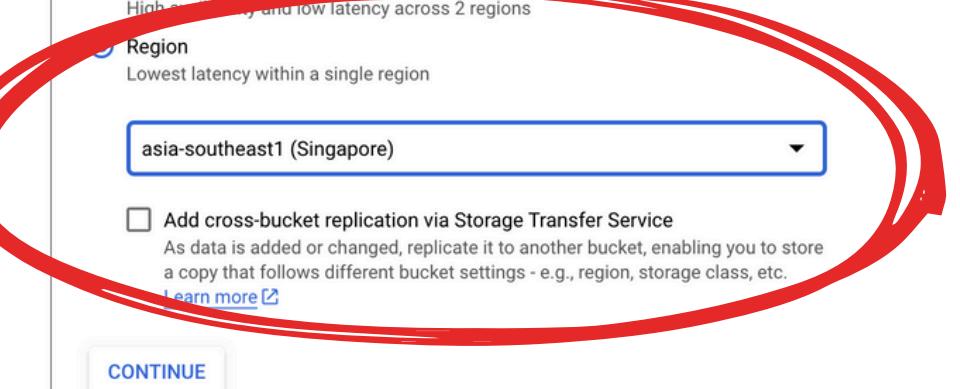

- Multi-region Highest availability across largest area
- Dual-region High availability and low latency across 2 regions
- Region Lowest latency within a single region

asia-southeast1 (Singapore)

Add cross-bucket replication via Storage Transfer Service As data is added or changed, replicate it to another bucket, enabling you to store a copy that follows different bucket settings - e.g., region, storage class, etc. [Learn more](#)

CONTINUE

Cloud Storage Create a bucket

Overview NEW Buckets Monitoring Settings

Get Started Pick a globally unique, permanent name. [Naming guidelines](#)

lab_mlops_01xxv

Good to know

Location pricing Storage rates vary depending on the storage class of your data and location of your bucket. [Pricing details](#)

Current configuration: Multi-region / Standard

Item	Cost
us (multiple regions in United States)	\$0.026 per GB-month
With default replication	\$0.020 per GB written

ESTIMATE YOUR MONTHLY COST

CONTINUE

Choose where to store your data Location: us (multiple regions in United States) Location type: Multi-region

Choose a storage class for your data Default storage class: Standard

Choose how to control access to objects Public access prevention: On Access control: Uniform

Choose how to protect object data Soft delete policy: Default Object versioning: Disabled Bucket retention policy: Disabled

4

Google Cloud tuchsanai Search (/) for resources, docs, products, and more

Cloud Storage Create a bucket

Overview NEW Buckets Monitoring Settings

Get Started Name: lab_mlops_01xxv

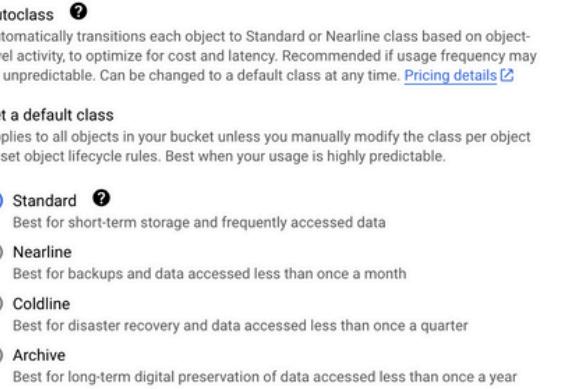

Choose where to store your data Location: asia-southeast1 (Singapore) Location type: Region

Choose a storage class for your data A storage class sets costs for storage, retrieval, and operations, with minimal differences in uptime. Choose if you want objects to be managed automatically or specify a default storage class based on how long you plan to store your data and your workload or use case. [Learn more](#)

- Autoclass Automatically transitions each object to Standard or Nearline class based on object-level activity, to optimize for cost and latency. Recommended if usage frequency may be unpredictable. Can be changed to a default class at any time. [Pricing details](#)
- Set a default class Applies to all objects in your bucket unless you manually modify the class per object or set object lifecycle rules. Best when your usage is highly predictable.
- Standard Best for short-term storage and frequently accessed data
- Nearline Best for backups and data accessed less than once a month
- Coldline Best for disaster recovery and data accessed less than once a quarter
- Archive Best for long-term digital preservation of data accessed less than once a year

Cloud Storage Create a bucket

Get Started Name: lab_mlops_01xxv

Choose where to store your data Location: asia-southeast1 (Singapore)
Location type: Region

Choose a storage class for your data Default storage class: Standard

Choose how to control access to objects

Prevent public access Restrict data from being publicly accessible via the internet. Will prevent this bucket from being used for web hosting. [Learn more](#)

Enforce public access prevention on this bucket

Access control

Uniform Ensure uniform access to all objects in the bucket by using only bucket-level permissions (IAM). This option becomes permanent after 90 days. [Learn more](#)

Fine-grained Specify access to individual objects by using object-level permissions (ACLs) in addition to your bucket-level permissions (IAM). [Learn more](#)

7

Google Cloud tuchsanai Search (/) for resources, docs, products, and more

Cloud Storage Create a bucket

Get Started Name: lab_mlops_01xxv

Choose where to store your data Location: asia-southeast1 (Singapore)
Location type: Region

Choose a storage class for your data Default storage class: Standard

Choose how to control access to objects

Choose how to protect object data Your data is always protected with Cloud Storage but you can also choose from these additional data protection options to add extra layers of security.

Data protection

Soft delete policy (For data recovery) When enabled, this bucket and its objects will be kept for a specified period after they're deleted and can be restored during this time. [Learn more](#)

Use default retention duration All buckets have a 7 day soft delete duration by default, unless this default has been customized by your organization administrator.

Set custom retention duration Specify how long this bucket and its objects should be retained after they're deleted. Setting a "0" duration disables soft delete, meaning any deleted objects will be permanently deleted.

Object versioning (For version control) For restoring deleted or overwritten objects. To minimize the cost of storing versions, we recommend limiting the number of concurrent versions per object and scheduling them to expire after a number of days. [Learn more](#)

Retention (For compliance) For preventing the deletion or modification of the bucket's objects for a specified period of time.

Network firewall policies

Firewall policies let you group several firewall rules so that you can update them all at once, effectively controlled by Identity and Access Management (IAM) roles. [Learn more](#)
